

This course largely deals with the C++ language.

While this course doesn't have an official textbook, there are some external references you might find useful. These websites have searchable documentation for most of the C++ language and standard library:

<http://www.cplusplus.com/>

<https://en.cppreference.com/w/>

(If you browse the above references, keep in mind that the specific version of C++ covered in the lectures is C++14.)

If you would like a different perspective in writing, there is a sequence of beginner tutorials to the C++ language here:

<http://www.cplusplus.com/doc/tutorial/>

If you are eager to purchase a book, this answer on the StackOverflow programmer community site provides an overview of many C++ books:

<https://stackoverflow.com/questions/388242/the-definitive-c-book-guide-and-list>

Mark as completed
